Figures represent reported human Campylobacter cases in New Zealand. Calendar year-to-date (YTD) represents cumulative cases from January to the selected reporting month. Rolling 12 months represents cumulative cases for the 12 months up to and including the reporting month. Data is provisional and may be subject to revision.

Current month figures are compared with the equivalent month in the prior year. Year-to-date (YTD) figures represent cumulative reported cases from January to the selected reporting month, with percentage change calculated against the equivalent prior-year period. District figures are case counts and are not adjusted for differences in regional population.

Note: Percentage changes should be interpreted with caution where case numbers are low, as small changes in reported cases can result in large percentage movements.
